Operator description. An arcade sequel reworked based on community feedback with updated graphics, mechanics, dynamic levels and unexpected events. The operator specifies optimization for desktop and mobile. In the described round, the player selects an amount and difficulty, moves by pressing, collects golden eggs to build up the multiplier, avoids cars, traps and trains, uses safe zones and chooses when to stop. An error ends the round. RTP 98%, volatility from medium to high, range €0,01–€200, theoretical maximum €10 000 per round. The operator claims Provably Fair with real-time outcome verification and an independent audit of the certified RNG. The auditor and certificate details are confirmed.
